

Naylynn Tañón Reyes

☎ (619) 319-0095 | ✉ naylynn.tanon@gmail.com | [in naylynnantonreyes](https://www.linkedin.com/in/naylynnantonreyes)

Education

Smith College

B.A. | STATISTICAL & DATA SCIENCES

Sept 2020 - May 2023

San Diego Mesa College

A.A. | PHYSICAL SCIENCES

Sept 2016 - May 2018

Skills

Languages Python | R | SQL

Coursework Data Science | Statistics | Multiple Regression | Machine Learning | Linear Algebra | Discrete Mathematics | Data Structures

Technical Data Analysis | Data Mining | Data Wrangling | Data Scraping | Project Management | Technical Documentation

Experience

Enhance Health

SENIOR BUSINESS INTELLIGENCE ANALYST

Glendale, CA

October 2023 — July 2024

- Extracted and analyzed complex datasets, using SQL, delivering actionable insights and tailored reports to support strategic decisions for the marketing department and CMO.
- Automated the extraction, transformation, and loading (ETL) of raw call data from JSON files into SQL tables using Airflow, Python, and SQL scripts. Unnested and mapped data to specific columns, ensuring up-to-date data integration across multiple JSON datasets.
- Managed project requests from the Marketing department and CMO by leveraging tools such as Notion, JIRA, and Trello to track tasks, create meeting notes, and meet project timelines.
- Led the Analytics department's documentation efforts, creating and standardizing templates, procedures, and style guides for all documentation and Tableau dashboards.

Bluebonnet Data

DATA SCIENCE FELLOW - SENIOR CAPSTONE PROJECT

Northampton, MA

January 2023 — May 2023

- Created a linear regression model to explore how presidential election results correlate with demographics for the last four elections, with net partisanship being the dependent variable and county demographics being the independent variables.
- Oversaw weekly client meetings and daily team meetings as well as managed the project's short, structured work periods to complete tasks within set timelines in order to ensure continuous progress and alignment with project goals and milestones.

NASA — National Aeronautics and Space Administration

DATA SCIENCE INTERN

Pasadena, CA

May 2022 — August 2022

- Developed Python code to implement unsupervised machine learning algorithms on exoplanet data, improving classification accuracy of planetary characteristics and understanding of exoplanet populations. Various classifiers such as Random Forest, Naive Bayes, and Decision Tree were used to classify the exoplanets based on physical parameters.

MIT — Massachusetts Institute of Technology

ASTROPHYSICS RESEARCH ASSISTANT

Cambridge, MA

December 2020 — May 2021

- Began development of an MCMC model to automate predictions on when we can detect planets by fitting time series data in Python. This would save human-hours, telescope time, and monetary resources required to confirm the detection of planets for follow-up data.

Harvard University

PHYSICS RESEARCH STUDENT

Cambridge, MA

June 2019 — August 2019

- Identified an infrared Si X emission line in a total eclipse measurement of the Sun's corona and used Gaussian fitting, with IDL, to find the intensity gradient as a function of distance from Sun's center. Thus improving our understanding of the atomic physics of the Si X ion.

NASA — National Aeronautics and Space Administration

ASTROPHYSICS RESEARCH STUDENT

Greenbelt, MD

February 2019 — May 2019

- Analyzed hundreds of light-curve data files of low mass stars, using Python packages, to identify stellar flare rates, generate a stellar flare catalog and select stars for subsequent flare signature models to predict possibility of planet habitability.

NASA — National Aeronautics and Space Administration

DATA SCIENCE INTERN

Washington D.C.

October 2018 — January 2019

- Implemented machine learning and NLP, using Python, to identify which NASA documents should be added to the National Archives which eliminated time intensive manual categorization, reduced operational costs, and increased accuracy by 30 percent.

Honors & Awards

2022 **Thomas Lauritsen Research Fellow**, NASA — National Aeronautics and Space Administration

2021 **Stanford Undergraduate Research Fellow**, Stanford University

2018 **Caltech WAVE Research Fellow**, Caltech — California Institute of Technology
